Thanks Richard.

I'm reviewing the location map now to recommend PCB congener analysis locations to get a better idea of some fate and transport questions and fill in CSM gaps—is the latest sampling item. It's being provided for EPA input vs. approval, so that's definitely a misunderstanding on their part I think.

Ken would have a better sense of what has happened historically.

Thank you.

I can include a statement about the urgency of the Corps properly addressing these matters.

Does anyone know whether the Corps provided us with any sampling plans for our review and approval?

Richard, I like it; I just have one suggestion. So I assume you think it might be too on the nose to add 'the sooner the better' type sentiment here so they don't keep throwing money away particularly in the upland OU with the wrong goalposts in mind? Maybe suggest a meeting to clear this up as soon as possible?

On the NCP reference, this is sure a site that needs listing and an FFA to make that abundantly clear (and with teeth hopefully) but I think it's a timely reminder nonetheless listing or no listing. I'll reference that in communicating USFWS/YN/DEQ/EPA comments on the in water passive sampling work so they're less likely to be ignored.

Thank you.
